# Governance of public drinking water supply and sanitation utilities?

Allowing the populations to have access to drinking water and to sufficient sanitation, treating wastewater discharges, achieving good quality of the service provided and users' satisfaction, while complying with a legislative, regulatory and normative, modern and adapted framework, by preserving water resources with the best cost-effectiveness.

## Our references :

The International Office for Water (IOWater), a non-profit-making association, State approved by decree and entrusted with assignments of general interest, puts its legal, economic, rganizational, technical, teaching abilities &hellip;, at the disposal of national and local Authorities and public or private Operators of community water utilities, in France, in Europe and everywhere in the World. Analyses, studies, experts' reports, institutional or technical assistance, training: the services provided by IOWater can take all the forms best suited to its partners' practical needs.

Access to drinking water and sanitation is a big challenge over the world. The problems of water quality and quantity are increasing. Impacts of climate change are already sensitive and will intensify: it is necessary to consider the development of drinking water supply and sanitation utilities from a sustainable development viewpoint, by taking into account all the legal, environmental, social and economic aspects.
