"LEONARDO DA VINCI"

programme

- IOWater - Our projects : news and update -

Date de mise en ligne : 2008

OIEau

Within the " Leonardo Da Vinci" programme to support professional training in Europe ; the Education General Directorate of the European Commission selected two projects submitted by IOWater :

" Tech'III "

" Tech'III " is a feasibility study for the " Europeanisation " of a training programme for high level technicians. The training will be based on the University diploma, namely "Operation and maintenance of plants and networks" which is provided by the University and the Institute of Technology of Limoges , the Ahun Agricultural College in partnership with IOWater , in Limoges -La Souterraine .

The European partners involved are from Italy (Hydrocontrol), Germany (BEW) and Romania (CFDPDA) together with the Techware European network as regards the dissemination of results.

Students will receive this training and carry out practical training in companies located in 2 or 3 different countries to strengthen their knowledge of various contexts and to improve their autonomy and flexibility.

" Limousin Water"

" Limousin Water" is a project for providing flexibility to young people who are trained in Limoges and La Souterraine to enable them undertake part of their training in other European countries. 15 students from the National School of Engineers of Limoges (ENSIL) are now in Belgium , Greece , Italy , Germany , Poland and the United Kingdom , and a Romanian student in France .

Some scholarships are still available before mid-2001 : should any company be interested, do not hesitate.
