Eco-toxicity : emerging pollutants and relative regulation

- contenu - Agenda des évènements -

Date de mise en ligne : vendredi 30 mars 2012

OIEau - IOWater - OIAgua

These international meetings are organized within the European project KARIM with 8 partners and allow to match academic skills and SME projects across the North West Europe in the field of responsible innovation and also propose funding.

The aim of this forum is to share market opportunities and facilitate the exchange of ideas and knowledge. This is an ever changing arena and the field of nano-materials, in particular, is presenting new information all the time about what regulation could and should look like.

Upcoming deadlines and the changing nature of regulation is resulting in potentially exciting opportunities in areas such as :

- Socio-economic risk assessment
- Chemical assessment
- Training surrounding ECHA guidance
- The design and creation of ICT programs that assist in training
- Non-animal testing alternatives
