Continuing training for water professionals proves to be an essential investment to enable them to adapt to continuous regulatory and technical changes : [European Directives](#), [water laws](#), development of remote management, membrane filtration ...

Since its creation, the [French National Water Training Centre](#) has proposed training programmes that meet the objective of enhancing the skills of the staffs involved in the treatment, conservation and management of water resources, a resource that is increasingly sought for and more and more fragile.

With first-rate educational facilities ([7,500m² of technical and educational equipment](#), regularly upgraded – laying out of drinking water supply systems - laboratory - water and sludge treatment plants - sewerage systems that can be visited - metrology unit – meters reading and leak detection ...) and thanks to a team of [thirty permanent trainers](#) and a network of over 150 professional lecturers, the NWTC proposes a wide range of training courses : nearly [330 courses in the 2012 catalogue](#), allowing professionals to easily find the training modules that are necessary for their curriculum.

Constantly concerned about the quality of its organization and its services, the NWTC has obtained the [ISO 9001 certification](#) and the "[AquaPlus](#)" and "[Quali pluie](#)" Labels ([Waterplus](#) and [stormwater quality](#)).

At the international level, the NWTC is exporting its know-how by participating in the creation of water training centres over [the world](#) (Poland, Mexico, Saudi Arabia, South Africa ...) and is an active member of [INWTC](#) (International Network of Water Training Centres).
