GWP paper on Water Security for Development

- contenu - Actualités -

Global Water
Partnership

Date de mise en ligne : mercredi 29 février 2012

Description :

Ce document rappelle que la sécurité vis à vis de l'eau au 21e siècle a besoin de dirigeants, de praticiens, et sociétés pour assurer une approche intégrée de la gestion des ressources hydriques. En outre, il soutient la nécessité d'élargir nos points de vue afin d'avoir les meilleures pratiques possibles - en différenciant le niveau local, les bassins et les villes.

OIEau

A continuation of a fragmented approach will be disastrous for our planet. More clarity is needed, however, on how Integrated Water Resources Management (IWRM) can best be implemented as a set of principles and as a process. This requires an expansion rather than a narrowing of views and approaches, argues the Global Water Partnership (GWP) in a new Perspectives Paper, "Increasing Water Security – A Development Imperative". The paper draws on country experiences around the world and points out keys for success in moving forward with the adaptive process of IWRM for sustainable development.

This Paper is intended to galvanise discussion within the larger water and development community. Feedback will contribute to a GWP Technical Committee Background Paper on how to increase water security
