First meeting of global network of transboundary basins working on climate change adaptation

On 20-21 February 2013, the first meeting of the global network of basins on climate change adaptation was successfully organized in Geneva by UNECE and the International Network of Basin Organizations (INBO). This meeting marked the transformation of the programme of pilot projects, implemented by UNECE and partners since 2010, into a global network of basins working on climate change adaptation in the transboundary context, that will be coordinated by UNECE and INBO in cooperation with partners. The global network aims to enable the comparison of methodologies and approaches, foster exchange of experiences and promote a shared vision between the participating basins.
