Hydrological monitoring of the Mekong River Basin : final evaluation of the Mekong-HYCOS project

The final evaluation of the Mekong-HYCOS project, which has been developing since 2006, with the support of the French Development Agency (AFD) and French Global Environment Facility (FFEM), was conducted jointly by ISL Engineering and IOWater on request from the Mekong River Commission (MRC). 49 hydrometric stations are now complying with HYCOS standards and a data management system is operational and accessible through the MRC portal.
