Colombia - A National Environmental System

- IOWater - Our projects : news and update -

Date de mise en ligne : samedi 4 janvier 2014

OIEau

Since 2012, the International Office for Water has been implementing the French-Colombian cooperation project funded by the Adour Garonne Water Agency with the Colombian Ministry of the Environment and Sustainable Development. This institutional support focuses on three main issues :

- Methodologies for formulating the Strategic Plan for the Rio Magdalena- Cauca ;
- Improvement of data management under the Environmental Information System of Colombia (SIAC) and more specifically the Water Resource Information System (SIRH), managed by the National Institute IDEAM.
- Organization of industrial pollution control in the Rio Bogota.

The CAR/ Rio Bogota, the largest of the 32 Colombian Regional Environmental Authorities, and IOWater organized a series of visits to industrialists which helped to check the relevance of the formulated recommendations.
