2001 - 2011 : 10 years of collaboration between the ICRC and IOWater

In 2001 the first students of the ICRC's Water-Habitat Department (Wathab) came to attend training courses of the FNWTC in ^{place}Limoges^{city}.

In 2002, collaboration was confirmed with a tailor-made training course for analyzing the drinking water supply infrastructures, which required the intervention of 7 permanent IOWater trainers, each specialist in his field (drinking water, network, pumping, maintenance, electricity, etc.).

In addition, technical audits and diagnostics were carried out in ^{country-region}Guinea^{country-region}, Congo Democratic Republic, ^{country-region}Burundi^{country-region} and soon in ^{place}^{country-region}Sudan^{country-region}^{place}.

Always rooted in a logic of actions complementary to the ICRC expertise, these interventions also allowed the IOWater trainers better understanding the local context and specific constraints encountered by the ICRC-Wathab delegates.

Finally, targeted training courses were carried out in several sub-Saharan African countries.

In May 2011, the training course organized and financed by ICRC was addressed to 18 technicians from the Water Company of ^{country-region}^{place}Guinea^{place}^{country-region} on the maintenance of pumping stations.
