19th International Conference on Aquatic Invasive Species

- contenu - Agenda des évènements -

Date de mise en ligne : dimanche 10 avril 2016

OIEau

The introduction and spread of invasive species in freshwater and marine environments is a worldwide problem that is increasing in frequency.

There are various pathways by which non-indigenous invertebrate, fish, and plant species are introduced, become established and cause significant damage to coastal and freshwater ecosystems, and to the economies that depend upon them. Next to habitat loss, invasive species are considered the greatest threat to native biodiversity.

This conference series is widely considered the most comprehensive international forum on aquatic invasive species and continues to evolve to address new and emerging issues. Sessions and presentations include the review of accumulated scientific knowledge ; presentation of the latest field research ; introduction of new technological developments for prevention, monitoring and control ; discussion of policy and legislation ; and mechanisms to raise awareness with the general public through education and outreach initiatives.
